

HVAC Installer is to install, maintain, and repair our client's HVAC systems. As an HVAC Installer, you will travel to our client's properties, and remove existing equipment and install, wire and start up the new equipment. The HVAC Installer must be skilled in cleaning, adjusting, and repairing systems. You will inspect and ensure that new systems work efficiently.

To be a successful HVAC Installer, you will need excellent organizational and problem-solving skills and be respectful. Your essential duty is to provide professional guidance and advice for clients to choose the most acceptable air quality system to satisfy their requirements. Customer satisfaction, safety, and comfort should be your highest priority for success in this role.

HVAC Installer Duties & Responsibilities:

- Installing, maintaining, and repairing the customer's ventilation, air conditioning systems, and equipment
- Diagnosing HVAC systems for electrical and mechanical defects
- Cleaning, adjusting, and repairing systems, and performing warranty services.
- Maintaining a detailed inventory of all HVAC equipment and resources
- Participate in all technical training
- Complying with service standards, work instructions, and customers' requirements
- Ability to work after hours, over weekends, and on public holidays with short or no notice.

HVAC Installer Requirements:

- High school diploma, GED, or suitable equivalently
- Valid driver's license
- Vocational, training, or apprenticeship of an HVAC program preferred.
- Current HVAC technician license preferred.
- Understanding of advanced principles of air conditioning, refrigeration, and heating
- Ability to work in confined spaces.
- Reliable and self-motivated
- Excellent written, verbal, and interpersonal skills
- Ability to work after hours, over weekends, and on public holidays with short or no notice.
